

How to complete your driver data

Excel and document folder instructions

Thank you. This pack is the format we use to add your drivers to the system. You do not enter drivers on the website. Fill the Excel, add the documents in the folders, and send both back to us.

What you have received

- Drivers.xlsx — one row per driver. Four example drivers are already filled so you can see the format.
- documents/drivers/ — one folder per driver. The folder name is that driver's email address.
- This instruction PDF.

Please delete the four example drivers (Ahmed, Fatima, James and Maria) before you send the pack back, including their folders. They are only examples of how to fill the form.

How to fill Drivers.xlsx

Open the Drivers sheet.

- Do not change or delete the header row (row 1).
- One driver = one row. Add as many rows as you need.
- Copy the company_id value from an example row onto every new row. Do not change that number.
- Copy the documents_folder pattern. It must match the driver's email, for example:
documents/drivers/john.smith@gmail.com

There is also a Required_Documents sheet that lists every file we need.

Required information (every driver)

These columns must be filled for every driver.

Column	What to enter
first_name	First name
last_name	Last name
email	Unique login email the driver can use, e.g. name@gmail.com. No two drivers can share an email.
phone	Full number with country code, e.g. +447700900101
password	Login password, at least 6 characters. You may use one shared temporary password for everyone.
residential_address	Full home address
emergency_contact_name	Emergency contact's name
emergency_contact_phone	Emergency contact's phone, with country code
nationality	e.g. British, Pakistani, Portuguese

Column	What to enter
license_no	Driving licence number
dbs_service_update_id	DBS Update Service ID
license_expiry	Driving licence expiry date
taxi_badge_expiry	Taxi badge expiry date
dbs_expiry	DBS certificate expiry date
safeguarding_expiry	Safeguarding certificate expiry date

Dates — follow this exactly

All expiry dates must be written as YYYY-MM-DD.

Accepted	Not accepted
2027-06-15	15/06/2027
2027-11-01	15-06-2027
2027-01-20	June 2027 or 15 Jun 27

Use the driver's real expiry date. Do not copy the sample dates.

British vs other nationality

This rule is important and is often missed.

If the driver is...	nationality	right_to_work_code
British	Type British	Leave this empty
Not British	Type their nationality, e.g. Pakistani	You must fill this. We cannot add the driver without it.

Passport (optional)

Passport is not required for every driver. The number and the document must always go together.

If you add a passport number, you must also add the passport document.

Leave passport_number empty if there is no passport, and do not add a passport file. If you enter a passport_number, put a file named passport.png (or passport.jpg / passport.pdf) in that driver's folder. Do not send a number without the file, and do not send a file without the number.

Document folders

Create one folder per driver inside documents/drivers/. The folder name must be the same email as in the Excel, all lowercase, with no extra spaces.

Excel email	Correct folder name
john.smith@gmail.com	documents/drivers/john.smith@gmail.com/

Wrong examples: a folder named John Smith, a folder named john.smith, or an Excel email of John.Smith@gmail.com with a folder named john.smith@gmail.com. The email and folder name must match exactly.

Put that driver's files inside their own folder only. Do not put all documents in one shared folder.

Required documents (every driver)

Every driver must have a profile photo and these 7 documents. Replace the tiny example images with the real photos or PDFs. Keep the file name exactly as shown. You may only change the ending to .png, .jpg, .jpeg or .pdf.

Document	Exact file name	Matching Excel expiry column
Profile photo	profile.png	—
Driving License (Front)	driving_license_front.png	license_expiry
Driving License (Back)	driving_license_back.png	license_expiry
Taxi Badge (Front)	taxi_badge_front.png	taxi_badge_expiry
Taxi Badge (Back)	taxi_badge_back.png	taxi_badge_expiry
DBS Certificate (Front)	dbb_certificate_front.png	dbb_expiry
DBS Certificate (Back)	dbb_certificate_back.png	dbb_expiry
Safeguarding Certificate	safeguarding_certificate.png	safeguarding_expiry
Passport (only if number is filled)	passport.png	—

Do not use names like license front.jpg or DBS.pdf. In the Excel, leave the document columns as those file names (already filled in the examples) and copy them onto each new row.

The four example rows

Look at these, then delete them before you send the pack back.

Example	What it shows
Ahmed Khan	British, no Right to Work, no passport
Fatima Ali	Not British, Right to Work filled, passport number and passport.png
James Wilson	British, no passport
Maria Santos	Not British, Right to Work filled, no passport

All four examples also include the profile photo and the 7 required documents.

Checklist before you send

- Example rows and example folders removed.
- One Excel row per real driver.
- company_id copied onto every row and left unchanged.
- Every email is unique and is a real address the driver can use.
- Folder name is exactly that driver's email.
- Every driver has a profile photo plus the 7 required documents.
- All four expiry dates are filled, format YYYY-MM-DD.
- British drivers: nationality is British, Right to Work left empty.
- Non-British drivers: nationality and Right to Work code both filled.
- If passport number is filled, passport.png (or jpg/pdf) is in that folder.
- If there is no passport number, there is no passport file.

If anything is missing, we will send back a list of which row, which field, or which file needs to be completed. If you are unsure about one driver, still send the others. We can add incomplete drivers later once the missing item is provided.
