

How to complete your vehicle data

Excel and document folder instructions

Thank you. This pack is the format we use to add your vehicles to the system. You do not enter vehicles on the website. Fill the Excel, add the documents in the folders, and send both back to us. Vehicles do not have login accounts. You can assign a driver later in the system.

What you have received

- Vehicles.xlsx — one row per vehicle. Four example vehicles are already filled so you can see the format.
- documents/vehicles/ — one folder per vehicle. The folder name is that vehicle's registration number.
- This instruction PDF.

Please delete the four example vehicles (AB12CDE, FG34HIJ, KL56MNO and PQ78RST) before you send the pack back, including their folders. They are only examples of how to fill the form.

How to fill Vehicles.xlsx

Open the Vehicles sheet.

- Do not change or delete the header row (row 1).
- One vehicle = one row. Add as many rows as you need.
- Copy the company_id value from an example row onto every new row. Do not change that number.
- Copy the documents_folder pattern. It must match the registration number, for example:
documents/vehicles/AB12CDE

There is also a Required_Documents sheet and a Vehicle_Types sheet. body_style must match Vehicle_Types exactly.

Required information (every vehicle)

These columns must be filled for every vehicle.

Column	What to enter
taxi_license_plate_number	Taxi licence plate number
registration_number	Vehicle registration (also used as the folder name)
make	e.g. Ford
model	e.g. Transit
vehicle_colour	e.g. White
year_of_first_registration	First registration date, YYYY-MM-DD
licensing_type	e.g. Nottingham City Council
body_style	Must match a value from the Vehicle_Types sheet exactly

Column	What to enter
seating_capacity	Number of seats (the examples already match the body type)
wheelchair_accessible	Yes or No. Must match the body type (wheelchair types = Yes)
mot_expiry	MOT expiry date
taxi_plate_expiry	Taxi plate expiry date
insurance_expiry	Insurance expiry date

Dates — follow this exactly

year_of_first_registration and all expiry dates must be written as YYYY-MM-DD.

Accepted	Not accepted
2027-06-15	15/06/2027
2019-03-01	15-06-2027
2027-01-20	June 2027 or 15 Jun 27

Use the vehicle's real dates. Do not copy the sample dates.

Vehicle type (body_style)

Copy one of these values exactly. Do not shorten or rewrite them.

body_style	Wheelchair accessible
Car - 4 seater	No
People Carrier - 6 passenger	No
People Carrier - 7 passenger	No
Minibus - 8 passenger	No
Minibus - Wheelchair ramp	Yes
Minibus - Wheelchair tail lift	Yes
Hackney - 5 passenger	No
Hackney - 6 passenger	No
Hackney - Wheelchair	Yes

body_style and wheelchair_accessible must match.

If you choose a wheelchair type (for example Minibus - Wheelchair ramp), set wheelchair_accessible to Yes. If you choose a non-wheelchair type, set it to No.

Document folders

Create one folder per vehicle inside documents/vehicles/. The folder name must be the same registration_number as in the Excel, with no extra spaces.

Excel registration_number	Correct folder name
AB12CDE	documents/vehicles/AB12CDE/

Wrong examples: a folder named Ford Transit, a folder named AB 12 CDE, or a registration of ab12cde with a folder named AB12CDE if they do not match the Excel exactly. Keep Excel and folder names the same.

Put that vehicle's files inside its own folder only. Do not put all documents in one shared folder.

Required documents (every vehicle)

Every vehicle must have a photo and these 5 documents. Replace the tiny example images with the real photos or PDFs. Keep the file name exactly as shown. You may only change the ending to .png, .jpg, .jpeg or .pdf.

Document	Exact file name	Matching Excel expiry column
Vehicle photo	vehicle_photo.png	—
V5 (Front)	v5_front.png	—
V5 (Inside)	v5_inside.png	—
MOT certificate	mot_certificate.png	mot_expiry
Taxi license plate document	taxi_license_plate.png	taxi_plate_expiry
Insurance certificate	insurance_certificate.png	insurance_expiry

Do not use names like MOT.pdf or insurance scan.jpg. In the Excel, leave the document columns as those file names (already filled in the examples) and copy them onto each new row.

The four example rows

Look at these, then delete them before you send the pack back.

Example	What it shows
AB12CDE	Car — not wheelchair
FG34HIJ	People Carrier — not wheelchair
KL56MNO	Minibus with wheelchair ramp
PQ78RST	Hackney wheelchair

All four examples also include the vehicle photo and the 5 required documents.

Checklist before you send

- Example rows and example folders removed.
- One Excel row per real vehicle.
- company_id copied onto every row and left unchanged.
- registration_number is unique and matches the folder name.
- body_style copied exactly from the Vehicle_Types list.
- wheelchair_accessible is Yes or No and matches that body type.
- Every vehicle has a photo plus V5 front, V5 inside, MOT, taxi plate and insurance files.
- year_of_first_registration, mot_expiry, taxi_plate_expiry and insurance_expiry are YYYY-MM-DD.

If anything is missing, we will send back a list of which row, which field, or which file needs to be completed. If you are unsure about one vehicle, still send the others. We can add incomplete vehicles later once the missing item is provided.
